DETAILED ACTION

Page 2

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) The invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1,9 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Saletta et al. (U.S. Patent # 4,827,369) or Farrington (U.S. Patent # 4,996,646).

Application/Control Number: 10/063,100 Page 3

Art Unit: 063100

Saletta et al. discloses claimed invention a trip unit (figure 3), comprising: a microprocessor (figure 3, item 100) operable at either a first state or a second state, the second state requiring more power than the first state; an analog-to-digital converter operatively connected to the microprocessor, the analog-to-digital converter (figure 3, item 82) being configured to provide the current sensing signal to the microprocessor; and a power supply being configured to provide the current, or a second current-sensing signal (figure 3, item 79), and being configured to provide the current sensing signal to the microprocessor; and a power supply being configured to receive a first current, or a second current alone or in combination with the first current, the power supply (figure 3, item 77a) providing an output to the microprocessor indicative of whether the power supply is receiving the second current, the power supply providing an operating current to the microprocessor and the analog-to-digital converter, and the microprocessor being configured to adjust between the first and second state depending upon the output (column 3, line 1-45). Similarly Farrington's figures 12-14 and 21-24, discloses all the claimed subject matters (column 1, lines 40-70+ and column 20, lines 45-70+)

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that

Application/Control Number: 10/063,100 Page 4

Art Unit: 063100

the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 1-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kornblit (U.S. Patent # 6,473,281) in combination with Saletta et al. (U.S. Patent # 4,827,369). Kornblit discloses all the subject matters (figure 5), including microprocessor, A/D converter, current sensor, voltage sensor and power supply. However Kornblit does not disclose the utilization of the technique for auxiliary power supply. Saletta et al. teaches the utilization of the similar technique for auxiliary power supply (figure 3). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Kornblit's trip unit by utilizing the technique taught by Saletta et al. for the purpose of increasing the protection and

5. Any inquiry concerning this communications or earlier from the examiner should be directed to Raj. Patel whose telephone number is (703) 305-7042. Any inquiry of a general nature or relating to the status of application should be directed to the Group receptionist whose telephone number is (703) 308-1782.
